DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on 05/07/09 has been fully considered and entered.

Reasons for Allowance

2. Claims 1-23 and 32-38 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or reasonably suggest all the limitations of claim 1. Specifically, the prior art fails to disclose a method for forming an apparatus for aligning and fixing an optical fiber relative to an optical source, comprising first and second fixing brackets, each fixing bracket including: a support member for attachment to a substrate; first and second cantilever arms extending from the support member in opposing directions, each cantilever arm including fiber engagement means for engaging with the optical fiber and cantilevered to engage the engagement means with the optical fiber; and the apparatus further comprising a substrate including support means for receiving the support members so as to dispose the first and second fixing brackets such that the fiber engagement means of the first fixing bracket oppose the fiber engagement means of the second fixing bracket, for receiving and supporting an optical fiber therebetween at two longitudinal positions of the optical fiber.

Claims 2-3, 6-11 and 13-23 depend from claim 1.

The prior art of record also fails to disclose or reasonably suggest all the limitations of claim 4. Specifically, the prior art fails to disclose a method for forming an apparatus for aligning and fixing an optical fiber relative to an optical source, comprising first and second fixing brackets, each fixing bracket including: a support member for attachment to a substrate; first and second cantilever arms having different cross-sectional areas and extending from the support member in opposing directions, each cantilever arm including fiber engagement means for engaging with the optical fiber, and the apparatus further comprising a substrate including support means for receiving the support members so as to dispose the first and second fixing brackets such that the fiber engagement means of the first fixing bracket oppose the fiber engagement means of the second fixing bracket, for receiving and supporting an optical fiber therebetween at two longitudinal positions of the optical fiber.

Claim 5 depends from claim 4.

The prior art of record also fails to disclose or reasonably suggest all the limitations of claim 12. Specifically, the prior art fails to disclose a method for forming an apparatus for aligning and fixing an optical fiber relative to an optical source, comprising first and second fixing brackets, each fixing bracket including: a support member for attachment to a substrate comprising a channel running therethrough; first and second cantilever arms extending from the support member in opposing directions, each cantilever arm including fiber engagement means for engaging with the optical fiber; the

apparatus further comprising a substrate including support means for receiving the support members so as to dispose the first and second fixing brackets such that the fiber engagement means of the first fixing bracket oppose the fiber engagement means of the second fixing bracket, for receiving and supporting an optical fiber therebetween at two longitudinal positions of the optical fiber; wherein the support means comprises a pair of blocks each adapted to engage with the respective channel of a respective support member.

The prior art of record also fails to disclose or reasonably suggest all the limitations of claim 32. Specifically, the prior art fails to disclose a method for forming a method for aligning and fixing an optical fiber relative to an optical source comprising the steps of positioning first and second fixing brackets cantilevered in the direction of the fiber on a substrate such that first and second fiber engagement means of the first fixing bracket oppose first and second fiber engagement means of the second fixing bracket; positioning an optical fiber intermediate the first and second fixing brackets for support therebetween at two longitudinal positions of the fiber; securing the first and second fixing brackets to the optical fiber at the points of contact of the fiber engagement means to the fiber; and adjusting the fiber alignment relative to the optical source, by adjusting the cantilevered fixing brackets.

Claim 33 depends from claim 32.

The prior art of record also fails to disclose or reasonably suggest all the limitations of claim 34. Specifically, the prior art fails to disclose a method for forming a method for aligning and fixing an optical fiber relative to an optical source comprising the steps of positioning first and second fixing brackets on a substrate such that first and second fiber engagement means of the first fixing bracket oppose first and second fiber engagement means of the second fixing bracket; positioning an optical fiber intermediate the first and second fixing brackets for support therebetween at two longitudinal positions of the fiber; securing the first and second fixing brackets to the optical fiber at the points of contact of the fiber engagement means to the fiber; adjusting the fiber alignment relative to the optical source comprising the steps of: distorting a first cantilever arm of each of the first and second fixing brackets; generating a resultant distortion in a second cantilever arm of each of the first and second fixing brackets in response to the distortion in the first cantilever arm; and correcting the alignment of the optical fiber as a consequence of the cantilever arm distortions.

Claims 35-38 depend from claim 34.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
